TIP

H key on the keyboard.

Interactive Symptom Checker: Develop an interactive symptom checker that guides users through a series of questions and visual aids to help them describe their symptoms more accurately. This engaging process can improve the accuracy of the predictions. Health Data Visualizations: Use data visualization techniques to present health data and predictions in an easy-to-understand and engaging format. Interactive charts and graphs can help users comprehend their health status better. Importance If each of these tasks could get done without any difficulty or cost, which would have Personalized User Profiles: the most positive impact? Allow users to create personalized profiles where they can track their health history, set health goals, and receive tailored recommendations based on their health data.
